OVERVIEW

The reports section consists of several preconfigured reports that can be used to extract information about the business. What follows are samples of each report so you can decide (without searching through the reports) if they would be useful for your business.

Average Cost Calculation

There are two options for calculating product average cost. The calculation method can be changed from this [Options | Setup | Product](#) and then tick/untick “[Use Rolling Average for Average Cost Calculation](#)”.

Note: Changing the calculation method will only apply from when you enable the option and new invoices are entered, it will not update historical data. For this reason, it is recommended that any changes are made at the end of the financial year for data consistency in reports.

Financial Year Average Cost

The Financial Year Average Cost (VetlinkPRO Default) is calculated by averaging the buy prices over the previous financial year. Total stock (including Bonus Stock) is divided by the Price paid to work out the average. This method can be used if you want to reset the average cost if large cost price changes or mistakes have occurred over time.

Rolling Average Cost

The “Rolling Average” is calculated where the value of the current stock on hand (Quantity on hand multiplied by the current average cost) is added to the value of the stock in the new invoice and then divided by the new stock total.

Note: If you receipt packing slips and enter financial invoices at a later date, stock updated via the packing slip can potentially be sold prior to the invoice being entered, thereby making the rolling average method less accurate.

Selectable Cost Price Calculation

Cost Price Calculation can now be changed between Average Cost and Last Cost for Stock Transfers, Stock Takes, Stock Adjusts, Stock Value Reports as well as cost of sales on items at billing. To view/change these options, look under [Options | Setup | Product | Stock](#) and select either “[Average Cost](#)” or “[Last Cost](#)” for each of the options.

Note: For Stock Take, Stock Transfer, Stock Adjust, and Billing Cost of Sales the Last Cost is taken from last invoice entered not based on date but order of entry. In contrast, when Last cost is used for Stock Value calculation, the Last Cost is based on invoice date.

Notes:
Hrs Rostered: Time staff is rostered to work EXCLUDING Unpaid Locks and INCLUDING Paid Locks.
Hrs with Clients: Time the staff member has worked with clients
Hrs without Clients: This figure also includes time manually locked out.
Hrs Booked: Total time booked with clients (including no shows).
Unpaid Locks: Time staff is locked out using the Unpaid Lock function in the diary.
% Time Productivity: Hours worked with clients / Hours Rostered less paid locks
Sales Productivity: \$ earned / Hours Rostered less paid Locks
Sales Efficiency: \$ earned / Hours worked with clients
\$ earned: The total sales generated by the staff member during the time they worked with clients. This figure is exclusive of tax.

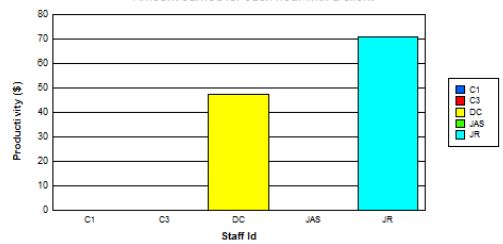

Percentage Time Productivity

The number of hours worked as a % of total hours rostered

Sales Efficiency

Amount earned for each hour with a client
